PROFESSIONAL SUMMARY

Data analyst who has run analytics for local service business clients since 2018 and currently builds statistical and operational reporting systems for a search and rescue organization in Alaska. Reports confidence intervals, sample size limits, and external validation figures rather than the most favorable number.

TECHNICAL SKILLS

Languages and Databases: SQL, PostgreSQL, Python (pandas, NumPy, SciPy, scikit-learn), R, Snowflake

BI and Tools: Power BI (DAX), Tableau, Looker Studio, Excel, Google Sheets, Git, Flask, Streamlit, REST APIs, Claude API, Google Analytics

PROFESSIONAL EXPERIENCE

Data Analyst and Integration Developer, Nalaquq, LLC / Quinhagak Search and Rescue

May 2026 to Present

Remote

- Built a search coverage and probability of detection model that converts searcher GPS tracks into a map of ground actually covered versus never walked, using published search and rescue literature, with conservative sweep width defaults so coverage is understated rather than overstated.
- Built an operational reporting pipeline for callout history covering seasonal timing, village activity, outcome, and search duration, with a sample size gate that refuses to report patterns below $n=10$ and a privacy guard that coarsens any count under 5 so small numbers cannot identify individuals.
- Delivered five feature branches, each with a full passing test suite of 136 to 197 tests, verified compatible against a heavily rewritten upstream codebase using a non destructive merge test.

Data Analyst and Consultant, Duplantier Advertising, Dayton, OH

2018 to Present

- Lead analytics for Alterations by Josetta (alterationsbyjosetta.com), a multi year engagement covering the full stack: built and maintain the website, used Google Analytics data to identify slow seasons and time paid campaigns against them, and handle bookkeeping and reporting.
- Analyze client campaign and operational data across accounts: seasonal demand patterns, profitability per service, campaign ROI, ROAS, CPA, and conversion tracking for local HVAC, dental, and auto repair businesses. Build and optimize paid Google and Meta campaigns from that analysis.
- Built a Python lead sourcing pipeline on the Google Places API covering 1,116 cities across 38 states, running daily.
- Built a Google Sheets CRM in Apps Script with lead tracking and pipeline summary reporting, plus a Flask site audit tool that scores prospect sites 0 to 100 using the Claude API in production.

Technical Support Specialist, Geek Squad

2013 to 2014

- Performed device diagnostics, operating system troubleshooting, and customer data recovery. Built the initial phone screen repair training program.

Pathologist Assistant, Montgomery County Coroner's Office, Dayton, OH

2010 to 2013

- Produced precise anatomical documentation in a high volume clinical setting under strict protocol and quality standards.

SELECTED ANALYTICS PROJECTS

Independent, self directed analyses on public datasets.

DNA Methylation Aging Clock | brandon-aging-clock.streamlit.app. Epigenetic age predictor trained on GSE40279, 656 whole blood samples, 176 CpG sites from 20,000. Test MAE 5.65 years, r 0.892. External validation on an independent cohort, GSE42861, 689 samples, held at MAE 6.36 and r 0.884.

Hospital 30 Day Readmission Analysis. Logistic regression on a 300 patient synthetic clinical dataset modeled on CMS HRRP metrics. Heart failure carried 19.7 times the odds of 30 day readmission versus hip and knee replacement, the lowest readmission reference group (95 percent CI 5.3 to 72.9, p below 0.001), with COPD, sepsis, and pneumonia between 6 and 10 times. Scheduled follow up trended protective (OR 0.58) but did not reach significance and is reported as such. ROC AUC 0.714 logistic, 0.587 Random Forest.

Business Intelligence Portfolio | brandonpython.netlify.app. Power BI dashboards covering readmission and HR attrition, a live Tableau Public dashboard, a live Looker Studio dashboard connected to Google Sheets, and a six query SQL portfolio across four PostgreSQL databases.

EDUCATION AND CERTIFICATIONS

B.S. Bioinformatics, University of Arizona

Expected December 2027

Certifications: Google Data Analytics Professional Certificate, 2024. The Global Career Accelerator, 2025: Python and Data, Querying Data, AI Professional Skills. Skydio X10 Professional Operator Training, 2026, a manufacturer course, not FAA Part 107 certification.
